

Continuation of Substance of Interview including description of the general nature of what was discussed: The examiner and Mr. Keenan discussed the Duckwall reference as it relates to independent claims 1 and 10. It was noted that Duckwall disclosed a thermally insulated mounting bracket for a gas turbine thermocouple. The mount including plural plates (22, 23, 24) and three columns (6, 7 and 16). One of the columns has a through hole for incorporating the thermocouple probes. The other two columns are solid. The examiner and Mr. Duckwall agreed to changes, as set forth in the examiner's amendment, which positively claims the device as a thermal isolation device for a gas turbine combustor including plural substantially flat plates secured to plural columns which are either formed with through holes or at least one of them has a through hole with a bolt securing the device between combustor components.
